

## FISH CARBURETOR SURVEY

If you have bought a copy of the Fish Carburetor Book (and only if), we would like to invite you to take part in our survey.

We ceased production of the Fish Carburetor in 1996. In that same year we sold the tooling to a man in Texas who thought he might want to put it into production. He never did. However, he did loan us the tooling he got from us.

We are considering doing a very limited run (around 100) of the 2" Bore H Model Fish Carburetor that we produced from 1981 to 1996. This size will work on almost anything from a 327 Chevy on up.

The bigger the engine, the heavier the load, the steeper the grade, the more stop-and-go driving is involved, the better it works. We have had people tell us that our 2" Bore Fish Model took their 440-cubic inch Chrysler motor homes up grades at 45 mph that previously would only do 15 miles per hour.

Obviously, with such a limited run, these carburetors will be a little pricey. What we intend to furnish are:

- One 2" Bore Fish Carburetor
- Intake Manifold Adapter
- Air Cleaner Adaptor
- Linkage

These will be meant for carbureted vehicles only, American made.

The price for the entire unit would be \$850.00—we pay the shipping.

If you would like one of these brand new Fish Carburetors and are willing to pay \$850.00 for one with the linkage and accessories, let us know through email or snail mail. If we get 100 responses, we will do a production run. If we only get 10 or 15, we won't.

Please indicate that you are willing to buy a new Fish Carburetor and give us your name, address, and phone number.
